TANGRAM

Graficación

Flores Hidalgo Yair Uriel

Hazem Alvarez Rodriguez

Se importan las librerias

```
In [196... import matplotlib.pyplot as plt
```

Primero se hace el grid para poder guiarnos en la grafica

Se pone un titulo a la grafica

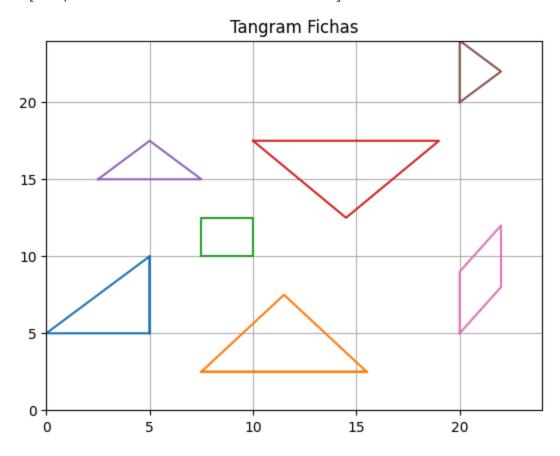

Posteriormente se crean las figuras del tangram en orden aleatorio

```
In [197...
          x1=0
          x2=24
          y1=0
          y2=24
          plt.axis([x1,x2,y1,y2])
          plt.axis('on')
           plt.grid(True)
           plt.title("Tangram Fichas")
          #azul
           plt.plot([5,5,0,5,5,5],[5,5,5,10,5,10])
          #amarillo
           plt.plot([7.5,11.5,15.5,7.5,15.5],[2.5,7.5,2.5,2.5,2.5])
          #verde
          plt.plot([7.5,7.5,10,10,7.5],[10,12.5,12.5,10,10])
          plt.plot([10,19,14.5,10],[17.5,17.5,12.5,17.5])
           plt.plot([2.5,7.5,5,2.5],[15,15,17.5,15])
          #cafe
           plt.plot([20,20,22,20],[20,24,22,20])
           #violeta
```

29/9/24, 9:48 p.m. Tangram

```
plt.plot([20,20,22,22,20],[5,9,12,8,5])
#plt.plot([1,2],[1,1])
```

Out[197... [<matplotlib.lines.Line2D at 0x2045e4280e0>]

Se ordenan las figuras para hacer un castillo con las figuras

```
In [198... x1=0
    x2=20.2

y1=0
    y2=20.2
    plt.axis([x1,x2,y1,y2])
    plt.axis('on')
    plt.grid(True)
    plt.title("Tangram Completo")

#azul
    plt.plot([8.4,12.4,12.4,8.4],[5,5,10.5,5])

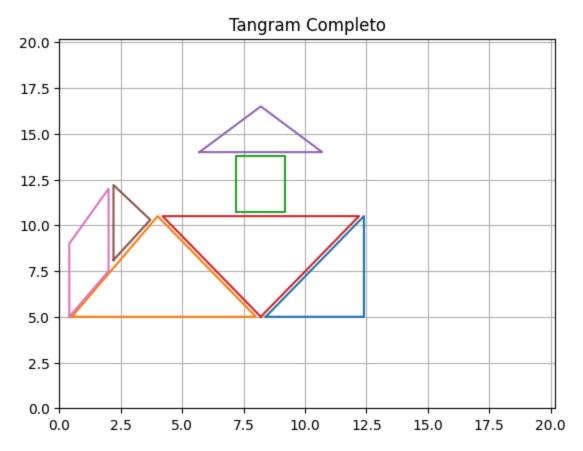

#amarillo
    plt.plot([0.5,4,8,0.5],[5,10.5,5,5])
#verde
```

29/9/24, 9:48 p.m. Tangram

```
plt.plot([7.2,7.2,9.2,9.2,7.2],[10.7,13.8,13.8,10.7,10.7])
#rojo
plt.plot([8.2,4.2,12.2,8.2],[5,10.5,10.5,5])

#morado
plt.plot([5.7,10.7,8.2,5.7],[14,14,16.5,14])
#cafe
plt.plot([2.2,2.2,3.7,2.2],[8.1,12.2,10.3,8.1])
#violeta
plt.plot([0.4,0.4,2,2,0.4],[5,9,12,7.5,5])
```

Out[198... [<matplotlib.lines.Line2D at 0x2045e466b40>]
